

NOVA C-0

CONCENTRATE CROP OIL

Blend of paraffin based oil and emulsifiers

Principal Functioning Agents

Paraffin Base Petroleum Oil	83.0%
Polyol Fatty Acid Esters and Polyethoxylated Derivatives	17.0%
TOTAL	100.0%^A

GENERAL INFORMATION

NOVA CO is a blend of special nonionic surfactants with phytobland (nonphytotoxic) oil. It is designed for use with a broad range of pesticides including herbicides, insecticides, fungicides and/or fertilizers and micronutrients. NOVA CO increases contact activity of the spray, aids in penetration of plant canopies, and provides uniform coverage of leaf surfaces. Optimum application and effects can be influenced by the crop, pest, spray equipment, spray volume, pressure, droplet size, spray mixture and environmental factors. Consequently, it is recommended that careful observations of the spray deposit be made and NOVA CO concentrations be adjusted accordingly.

PREPARATION OF SPRAYS

Sprays containing NOVA CO and pesticides, fertilizers or micronutrients should be applied from the same equipment and in the same manner as pesticides, fertilizers, or micronutrients would be applied alone.

FOR CONVENTIONAL USE, FOLLOW THE PESTICIDES, FERTILIZERS, OR MICRONUTRIENT'S MANUFACTURER'S LABEL adding NOVA CO last, agitating during the entire process continue to agitate while filling tank with water and agitate before and during each application to insure a uniform spray, or use 1-2 qts. of NOVA CO with your spray mix not to exceed 5% concentration by volume.
